

# Bleuphish Solutions

## - An Overview

Customizable, ready to deploy solutions from Bleuphish can leverage your existing technology assets and deliver

## Enterprise Governance

### Project Portfolio Management

Bleuphish PPM is a project portfolio analysis tool that provides decision-makers with valuable intelligence about all projects in the organization: ongoing projects, proposed new projects, and those that are on hold. Comprehensive ranking and scoring capabilities allow consensus to be gained on the projects that are most important, the optimal portfolio balance, and the best way to manage the project pipeline. By applying logic and objectivity to the selection process, Bleuphish PPM helps to ensure that portfolio value is maximized and the best projects are identified - those that align with the business strategy.

### Application Portfolio Management

Bleuphish Application Portfolio Management helps you in prioritizing and selecting your applications based on business need, choosing what applications you will build and what you will not. It also helps you in efficiently managing the value of existing and proposed applications while making you sure the rationale behind your decisions are captured for future use. Also, it helps in real-time monitoring of both the ongoing priorities and application TCO, allowing you to continually review and adjust your priorities, in real-time.

### Vendor Portfolio Management

Bleuphish VPM solution collects, organizes, and reports an unparalleled depth of detail that describes your vendor management function. You'll have the data needed to:

- Consolidate vendors
- Maintain corporate standards
- Monitor vendor track record and metrics
- Highlight compliance issues

## Communities of Practice

### Expertise Portfolio Management

How do you allow different groups, organizational divisions and geographically distributed members within your organization collaborate and form communities around expertise specific to business functions, strategies, building, best practices, processes and experiences?

Bleuphish addresses these growing needs with a tested solution: Enterprise Communities Portal.

Enterprise Communities Portal from Bleuphish provide out of the box capabilities that allow easy community creation and management,

Access Control List based access and process flows, intelligent content management features, extensive collaboration features like Discussion boards, Subject Matter Expert Profiling and Location Engine, Surveys, Tell a Friend / Referrals, Content and change alert notifications along with Light-weight Project Management to manage expertise development projects with tasks, calendars, roles and responsibilities. The solution also features an extensive administration console that allows drill-down administration at different levels.

### Educational Portfolio Management

How do you create a platform to allow your trainers and end user trainers to collaborate to plan, build, review and deploy your enterprise training content? Ask Bleuphish.

- All the features in the Enterprise Communities Portal solution  
- Additionally this solution features 3rd party content syndication in the form of Web services and integration with Learning Management Systems

## Workforce Optimization

### Events Portfolio Management

Imagine everyone across your organization having instant, online access to event schedules and detailed event information -- all from a single, centralized calendaring system - exactly what the Bleuphish Common Events Management solution addresses. The solution is an entirely Web-based application for maintaining and sharing multiple event calendars for the various departments and areas of interest throughout your departments, divisions and organizations.

Depending on how you configure this incredibly flexible calendaring system, the solution supports any number of public or private calendars, automated workflow for approving event submissions, centralized or distributed calendar management, and email reminders for event subscribers.

### People Portfolio Management

Bleuphish Resource Portfolio Management solution provides a flexible and automated solution that ensures timely and accurate processing of employee hours, pay, project and role based hours invested in specific projects.

Using a flexible web interface the solution allows in depth tracking of project hours, work and absence hours, timesheet creation and submission, and templates pre-populated with project codes to further accelerate document creation. The solution automatically checks for organizational and project-based policy compliance, sending alerts when policies have been violated.
